OXFORD: AT THE CLARENDON PRESS
Directions to Authors upon the Preparation of Papers

PAPERS must be typewritten on one side of the paper only and double-spaced, and submitted in duplicate with two sets of figures. In addition to the full title of the paper, authors should supply a 'running title' which will appear at the heads of the pages. Brain does not publish preliminary reports of work in progress, or brief accounts of single cases. More detailed studies on single cases, if appropriate, are acceptable. Papers reporting experiments on patients or healthy volunteers must record the fact that the subjects' informed consent was obtained (Declaration of Helsinki. Brit. Med. J. 1964, 2, 177). The typescript should be carefully and finally revised before submission to the Editor, so that if the paper is accepted it is ready for the printer. Clarity of style and brevity of expression are essential. Before submitting a paper it is always valuable to obtain the comments of colleagues who are unfamiliar with the work. We refer intending authors to the Journal of Physiology's 'Suggestions to Authors' free of charge from Cambridge University Press. Shaftesbury Road, Cambridge CB2 2BS.

The paper should be accompanied by a declaration in the following terms: 'The work reported in the attached paper entitled . . . has not been, and is not intended to be, published anywhere except in Brain.'

BIBLIOGRAPHIC REFERENCES should be limited to essential literature; they should be listed at the end of the paper in alphabetical order, and not numbered. In the case of a Journal: author's name, date of publication in brackets, are followed by the title of the paper, the name of the Journal in full and underlined for italics, the volume number and the first and last page numbers of the paper quoted, both in Arabic numerals. In the case of a book: author's name, date of publication in brackets, title of book underlined for italics, place of publication, publisher's name, chapter and page numbers in Arabic numerals. Works by the same author should be given in chronological order, and if there be more than one in a year, they are marked a, b, c, etc.; when an author's name recurs a short line is used. In the text numbered references are not used, but the author's name is followed by the appropriate year in brackets.

ILLUSTRATIONS should, where possible, be line drawings in Indian ink on separate white boards, numbered, and with the author's name on the back. Drawings and other illustrations should not exceed twice the size of the reproduction and thus lines must be thick enough to show up after reduction. Lettering and numbering should be inserted in pencil on the drawing, or in ink on a transparent overlay, so that professional lettering and numbering can be substituted. Legends should be on separate sheets and numbered. Desired positions of tables and figures should be marked by writing instructions enclosed within lines and brackets, e.g.

(Table 3 near here) or (Fig. 4 near here).

Half-tone photographs must be kept to a minimum. Excellent photographs with clear contrast are essential, especially for the reproduction of electron micrographs. Authors may be asked to contribute to their cost. There should be a bar on all micrographs giving magnification, e.g. 1 μm.

Authors are asked not to reprint their papers, or to authorize others to do so, without first consulting the Oxford University Press (Academic Division), Walton Street, Oxford, OX2 6DP.

Studies in Developmental Neurobiology

Essays in Honour of Viktor Hamburger

W. Maxwell Cowan

This volume is not only a fitting tribute to Viktor Hamburger but, reflecting the breadth of his scientific interests, it provides a critical discussion of many of the current issues in the field of developmental neurobiology. It gives an overview of many active areas in the field, and will be invaluable to workers in it, to other neuroscientists, and to developmental biologists. £30

Brain and Intelligence in Vertebrates

Euan M. MacPhail

The author provides a comprehensive survey of comparative studies of brain organization, brain size, and intellectual capacity in vertebrates. Chapters concerned with the various vertebrate classes develop the theme that there is no conclusive evidence for differences in intellectual capacity among vertebrates (excluding man), and that, among mammals, man's superior general problem-solving ability may be due solely to his possession of language. £20 paperback £10.95

Meaning and Purpose in the Intact Brain

A Philosophical, Psychological, and Biological Account of Conscious Processes

Robert Miller

This book provides a theory of major functions of the mammalian forebrain. It is concerned with consciousness, learning, and behaviour in the intact organism, but the author also tries to reckon with the panorama of biological findings revealed by recent brain research. Proposals are made for the role of neocortex, striatum, and hippocampus in cerebral information processing. The theory incorporates data from many experimental and clinical disciplines, and is set in a distinctive but necessary philosophical framework. £20

Epidemiology of Dementia

James A. Mortimer and Leonard M. Schuman

A brief but comprehensive survey of the major issues involved in the epidemiology of dementia, this book is organized in three sections. The first reviews studies of dementia, discusses differentiated diagnosis and clinical nosology, and considers methods for the clinical identification of cases. The second deals with the etiology of primary dementing illness. The third addresses methodological problems. £16

A major new edition...  

TEXTBOOK OF EPILEPSY  
Edited by John Laidlaw and Alan Richens  
1982 416 pages illus hardback £27.00 ISBN 0 443 02039 6  

A comprehensive and up-to-date account of the diagnosis and treatment of epilepsy. This edition has been considerably revised and expanded, and now includes contributions from eminent authorities in the USA, Canada, Denmark, Sweden, France and Italy, in addition to the United Kingdom, giving a more international perspective on the subject. 

Reviews of the first edition include:  
'... an excellent summary of present-day knowledge...' Lancet  
'... this excellent book can and should be read in its entirety...' Journal of Neurology, Neurosurgery & Psychiatry  

Volume 3 in the series  
Clinical Neurology and Neurosurgery Monographs  

EVOKED POTENTIALS IN CLINICAL TESTING  
Edited by A.M. Halliday  
1981 800 pages 253 line illus & 5 half-tones hardback £15.00 approx ISBN 0 443 01791 3  

This book, edited by one of the key figures in the field, provides the sort of information which will be useful to all those setting up an evoked potential (EP) service for the first time. Each chapter covers the use of EP recordings in a specific field, and has been written by an acknowledged authority familiar with their use in a day to day setting.  

New book...  

CHEMISMS OF THE BRAIN  
BASIC AND APPLIED NEUROCHEMISTRY  
Edited by Richard Rodnight, Herman S. Bachelard & William L. Stahl  
1981 348 pages 20 half-tone & 69 line illus hardback £25.00 ISBN 0 443 02409 X  

Commemorative volume...  

EPILEPSY AND PSYCHIATRY  
Edited by E.H. Reynolds and M.R. Trimble  
1981 400 pages 10 half-tone & 2 line illus hardback £22.00 ISBN 0 443 02311 5  

The publication of this book commemorates the centenary of the classic work by Sir William Gowers 'Epilepsy and Other Chronic Convulsive Diseases', which was published by Churchill in 1881.  

New volume...  

RECENT ADVANCES IN CLINICAL NEUROLOGY-3  
Edited by W.B. Matthews and Gilbert H. Glaser  
1981 264 pages 24 half-tone & 10 line illus paperback £11.00 ISBN 0 443 02121 X ISSN 0307 7403  

Churchill Livingstone  
Robert Stevenson House, 1-3 Baxter's Place, Leith Walk, Edinburgh EH1 3AF, UK
Published in association with the Royal Society for Mentally Handicapped Children and Adults, the Journal of Mental Deficiency Research is devoted exclusively to the scientific study of mental deficiency and publishes papers reporting original observations in this field. The subject matter includes clinical case reports, pathological reports, biochemical investigations, genetics and cytogenetics, psychological, educational and sociological studies, the results of animal experiments or studies in any discipline that may increase knowledge of the causes, prevention or treatment of mental handicap. Reviews are submitted from experts from time to time on themes in which recent research has produced notable advances. All papers are assessed by expert Readers.

Subscription Information
The Journal of Mental Deficiency Research is published quarterly. Subscription rates for 1982 are: £22.50 (U.K.), £27.00 (overseas), $62.50 (U.S.A. and Canada) post free, including delivery by air freight to subscribers in the U.S.A. and Canada.

Order Form — send to Blackwell Scientific Publications Ltd, P.O. Box 88, Oxford, England

Blackwell Scientific Publications
Behavioral Neurology
Jonathan H. Pincus and Gary J. Tucker

'While emphasizing neuropsychological unity, it also gives a succinct and useful outline of the clinical features of the conditions discussed; particularly well done for seizures and schizophrenia. It can be recommended to final year clinical students and to both neurologists and psychiatrists as a current physiological and pharmacological exposition of the neuropsychiatric approach. It is good value for its modest price.' Journal of Neurological Sciences.

The Synaptic Organization of the Brain
Gordon M. Shephard

'This lucid book . . . presents a systematic comparison of those regions of the mammalian brain that have been most thoroughly studied. . . . Anyone interested in neurobiology can read this book with profit.' Quarterly Review of Biology. 'The book offers an excellent introduction to the principles of synaptic organization of various brain regions.' Neuroscience. (From reviews of the first edition). Second edition illustrated paper covers

Structures of the Human Brain
A Photographic Atlas
Stephen J. DeArmond, Madeline M. Fusco, and Maynard M. Dewey

'It is pleasant to be able to recommend unreservedly a book one has been asked to review . . . most medical undergraduates and graduates find it difficult to understand the three-dimensional structure of the brain, and any illustrations that really help will be of value. The present work should do this not only for medical students and neurological trainees, but for anyone whose work is concerned with the central nervous system, including clinicians, neuropathologists, and neuroradiologists.' Journal of Neurological Sciences. Second edition illustrated paper covers spiral bound

The Hippocampus as a Cognitive Map
John O'Keefe

'A remarkable achievement. Apart from the grandeur of its scope, it will remain a source book for many years to come.' New Scientist. 'The authors have performed an impressive task, for which many of their fellow scientists are, and will be, grateful indeed.' Brain. Illustrated

Oxford University Press
invite applications for the post of

NEUROLOGIST

Applicants should be board certified or equivalent with a minimum of 5 years experience in a teaching institution with E.E.G. and E.M.G. experience. Preference will be given to applicants with administrative experience to initiate new service.

Salaries are highly competitive and negotiable. All clinicians will hold faculty appointments. Contracts are for one year and renewable. Instruction is in English.

Benefits include furnished housing, air tickets to and from Saudi Arabia once per year for a family of four, a 60-day vacation with pay, generous overweight allowance and educational allowance for children. No Saudi tax.

Please send curriculum vitae with current telephone number and the names and addresses of three referees to:
