The role of cerebellar structures in the execution of serial movements. A. W. Inhoff, H. C. Diener, R. D. Raja and R. Ivry 565

Direct dyslexia. Preserved oral reading of real words in Wernicke’s aphasia. W. W. Lytton and J. C. M. Brust 583

Observations during transient global amnesia. A behavioural and neuropsychological study of five cases. J. R. Hodges and C. D. Ward 595

Chronic hyperalgesia and skin warming caused by sensitized C nociceptors. M. A. Cline, J. Ochoa and H. E. Torebjörk 621

Obsessive-compulsive and other behavioural changes with bilateral basal ganglia lesions. A neuropsychological, magnetic resonance imaging and positron tomography study. D. Laplane, M. Levasseur, B. Pillon, B. Dubois, M. Baulac, B. Mazoyer, S. Tran Dinh, G. Sette, F. Danze and J. C. Baron 699

The distribution of muscular weakness in upper motor neuron lesions affecting the arm. J. G. Colebatch and S. C. Gandevia 749

Anticipation in myotonic dystrophy: fact or fiction? C. J. Höweler, H. F. M. Busch, J. P. M. Geraedts, M. F. Niermeijer and A. Staal 779

Hand and sex differences in the isthmus and genu of the human corpus callosum. A postmortem morphological study. S. F. Witelson 799

OXFORD UNIVERSITY PRESS
Instructions to authors

PAPERS must be typewritten on one side of the paper only. They should be double-spaced, including text, tables, legends and references. If prepared on a word processor, papers printed with a low resolution dot-matrix type will not be considered. In addition to the full title of the paper, authors should supply a running title which will appear at the heads of the pages. This should not exceed forty characters, including spaces. A short summary, to appear at the beginning of the paper, should also be provided. Brain will consider for publication articles on clinical neurology and neuropsychology, and on basic neuroscience if relevant to the understanding of neurological disorders. Studies purely on normal material are not usually accepted. Brain does not publish preliminary reports of work in progress, brief reports on single cases or correspondence. More detailed studies on single cases will be considered if they lead to significantly new insights or principles. Papers reporting experiments on patients or healthy volunteers must record the fact that the subjects' informed consent was obtained, according to the Declaration of Helsinki (Brit. Med. J., 2, 177). Experiments on animals must conform to accepted ethical standards. Review articles, if authoritative and topical, will also be considered. Four copies of the paper must be submitted. These will not be returned if the paper is not accepted for publication. The illustrations will be returned if a request is made at the time of submission. Should the paper be accepted subject to revision, four copies of the revised version must be submitted. At the time of the initial submission, the paper must be accompanied by the following declaration. 'The work reported in the attached paper entitled . . . has not been, and is not intended to be, published anywhere except in Brain'. It must be signed by all authors. Previous publication of the results in abstract form will not preclude consideration.

BIBLIOGRAPHIC REFERENCES should be limited to essential literature. They should be listed at the end of the paper in alphabetical order and not numbered. For a citation from a journal, the author's name in capital letters and the year of publication in brackets are followed by the title of the paper, the name of the journal in full and underlined for italicization, the volume number and the first and last pages of the journal. For multiple publications by the same author, those by the author alone are listed first and any with two or more co-authors listed subsequently in chronological order. The names of all authors must be given up to a maximum of six. If there is more than one paper by the same author in a given year, these should be listed by initials, first name, etc., after the year. For books, the author's name and year of publication in brackets are followed by the title of the book, underlined for italicization, place of publication, publisher's name and first and last page numbers. For chapters in books, the author's name and year of publication in brackets is followed by the title of the chapter, the title of the book (underlined), preceded by 'In:', the name(s) of the editor(s), the place of publication, the name of the publishers and the first and last pages of the chapter. In the text, numbered references are not used. The author's name and year of publication are given in brackets. If there are three or more authors, the name of the first is followed by et al. The punctuation, both in the Reference list and in the text, should follow the style of the journal (see current issue). Papers in which the reference citations do not follow this format may be returned for retyping. References to papers 'in preparation' or 'submitted' are not acceptable; if 'in press' the name of the journal or book must be given. Reference citations should not include 'personal communications' or other inaccessible information; information derived from personal communications or from unpublished work by the authors should be referred to in the text.

ILLUSTRATIONS should be original line drawings or glossy prints, with their number and the author's name on the back. They should be of sufficient size to permit relettering by the publishers. The journal reserves the right to reduce the size of illustrative material. Half-tone photographs, particularly for electron micrographs or CT or MR images, must be of good quality. All micrographs must carry a magnification bar (e.g., 1 μm). Colour illustrations are accepted, but the authors will be required to contribute to the cost of the reproduction. An estimate of the cost will be provided. The number of all illustrations must be kept to a minimum. The desired position of figures and tables should be indicated in the typescript of the paper (e.g., fig. 1 near here, in brackets). Legends for figures should be listed on a separate sheet. All tables must bear a title. Footnotes may be used in the text, but not in the abstract.

Authors are requested not to reprint their papers, or to authorize others to do so, without first consulting Oxford University Press (Copyright Department), Walton Street, Oxford OX2 6DP.
NEW FROM OXFORD

Mild Head Injury
Edited by Harvey S. Levin, Arthur L. Benton, and Howard M. Eisenberg
Despite extensive documentation of post-concussion symptoms following apparently mild head injury, only recently has the full magnitude of the problem been appreciated. This book is the first comprehensive discussion of the subject.
0 19 505301 X, 288 pp., illus., OUP USA, April 1989 £32.00

Blood Flow in the Brain
Edited by W. J. Angerson, C. D. Sheldon, J. C. Barbenel, A. C. Fisher, and J. D. S. Gaylor
This volume and the one listed under Barbenel below derive from papers presented at the Blood Flow Conference of the Biological Society. This volume describes recent developments in techniques for studying the cerebral circulation and their application to clinical problems.
Oxford Medical Engineering Series No. 7
0 19 857646 3, 160 pp., illus., Clarendon Press, January 1989 £25.00

Brain Opioid Systems in Reproduction
Edited by Richard G. Dyer and Richard J. Bicknell
Many aspects of reproduction depend on brain signals controlling hormone secretion from the pituitary gland. Recently, opioid peptides have been shown to be essential in regulating sexual behaviour and reproduction. In this volume, experts explain the control processes.
0 19 857694 3, 384 pp., illus., May 1989 £45.00

Blood Flow in Artificial Organs and Cardiovascular Prostheses
Edited by J. C. Barbenel, A. C. Fisher, J. D. S. Gaylor, W. J. Angerson, and C. D. Sheldon
The second of two volumes of papers presented at the Blood Flow Conference of the Biological Engineering Society (for the other see under Angerson above), this volume includes contributions on aspects of blood flow in cardiovascular prostheses and artificial organs.
Oxford Medical Engineering Series No. 8
0 19 857647 1, 288 pp., illus., Clarendon Press, January 1989 £35.00

Consciousness in Contemporary Science
Edited by A. J. Marcel and E. Bisiach
The place of consciousness in modern science is here discussed by authorities in a variety of disciplines. They examine its theoretical status; its basis in cognition and brain organization; conscious and non-conscious behaviour; disorders of consciousness, and other topics.
0 19 852168 5, 416 pp., illus., Clarendon Press, December 1988 £45.00

NEW IN PAPERBACK

Duchenne Muscular Dystrophy
Revised Edition
Alan E. H. Emery
This new paperback edition has been revised to incorporate the recent discovery of the gene responsible for the disease.
'...wholeheartedly recommend this book to all clinicians, scientists, and members of the caring community involved with Duchenne dystrophy.' The Lancet on the hardback edition
Oxford Monographs on Medical Genetics No. 15
0 19 261798 2, 336 pp., illus., paperback, December 1988 £17.50
0 19 261556 4, hardback, 1987 £35.00

OXFORD UNIVERSITY PRESS
Human Organic Memory Disorders
ANDREW MAYES

Analysis of how brain damage effects memory has illuminated how the intact brain mediates memory processes. By providing a taxonomy of elemental memory disorders, the specific processes disrupted and the lesions responsible, Andrew Mayes examines neurological and psychiatric syndromes and normal memory function.
