| **Brain and Bannister's Clinical Neurology**  
Seventh Edition  
Roger Bannister  
- Revised and up-dated throughout  
- New chapter on neurological complications of AIDS  
- New sections on imaging and molecular genetics  
Since publication of the sixth edition there have been extraordinary technical advances most notably in the fields of molecular genetics and new imaging techniques. There are new sections on each of these topics. Many new topics have been introduced and there have been major revisions to most chapters.  
0-19-261989-6, 634 pp., illus., February 1992 **£50.00**  
0-19-261913-6, paperback **£22.50**  |
| **Autonomic Failure**  
A Textbook of Clinical Disorders of the Autonomic Nervous System  
Third Edition  
Edited by Roger Bannister and Christopher Matthias  
- Completely revised and up-dated  
- Nineteen new chapters  
- Provides practical guidance to investigation, diagnosis, and treatment  
Since the last edition of this important and respected book, there have been numerous and rapid advances in the field of autonomic disorders, this new edition reflects these, with nineteen new chapters as well as extensive revision of all other chapters.  
0-19-262219-6, 960 pp., illus., June 1992 **£95.00**  |
| **Cerebral Dysgenesis: Embryology and Clinical Expression**  
Harvey B. Sarnat  
This book integrates the morphological, clinical neurological, genetic, neurophysiological and imaging aspects of cerebral malformations in the context of a lucid embryological explanation.  
0-19-506442-9, 464 pp., illus. (OUP USA), May 1992 **£65.00**  |
| **Measurement in Neurological Rehabilitation**  
Derick T. Wade  
This book discusses the principles of clinical measurement. It outlines the most useful assessments in common diseases and aims to encourage a more critical approach to rehabilitation.  
0-19-262180-7, 408 pp., illus., March 1992 **£50.00**  
0-19-261954-3, paperback **£25.00**  |

OUP books are available from all good booksellers. Customers in the UK and Europe may also order directly from OUP. Credit card holders may order by telephone +44 (0) 536 744964, 24hrs, or fax +44 (0) 536 746337. Please add £1.75 for p&p.  
Written orders should be sent to OUP Distribution Services, Saxon Way West, Corby, Northants NN18 9ES, enclosing a cheque or credit card details.
Communicating the Latest in Neuroscience

I. Lockard

Desk Reference for Neuroscience

In recent years, the boundaries of the neurological fields have blurred, and students and scientists in all subdivisions of neuroscience now must be familiar not only with the terminology of their own specialty but also with that of the related disciplines. This second edition of the Desk Reference for Neuroscience is an accessible and practical guide to essential terms and definitions in all branches of the neurosciences.

P. Ascher, D. W. Choi, Y. Christen (Eds.)

Glutamate, Cell Death and Memory

This book, the first in the new series Research and Perspectives in Neurosciences, contains the proceedings of the meeting which was held in Paris on September 24, 1990. The series will deal with the most current research. Glutamate - the subject of the first volume - is an excellent example since it has a major role in many physiological or pathological situations.

S. L. Erdi (Ed.)

GABA Outside the CNS

Written in a thought-provoking style, this book is a timely overview of the knowledge about gamma-aminobutyric acid (GABA) in the peripheral nervous system and in non-neuronal tissues. Many examples are provided for the diverse functions of this amino acid in the periphery as neurotransmitter, hormone, and humoral or even trophic factor from the autonomic ganglia to the endocrine stomach and pancreas, and from the tubular epithelium of the kidney to the spermatozoa.

A. Arduini

Principles of Eidetics
Outline of a Theory

The author strongly believes that a large gap still exists between today’s understanding of neurophysiology concerning somatic and autonomic functions on one hand, and the unfathomable properties of the mind on the other. For this reason, Principles of Eidetics aims to give a comprehensive, critical summary of the fundamentals of the core of the mind: its ideas and their relationships to corresponding concepts, development of thought, memory and will.

Attention to the details requested here will facilitate the expeditious processing of your paper. Authors are requested not to reprint their papers, or to authorize others to do so, without first consulting Oxford University Press (Copyright Department), Walton Street, Oxford OX2 6DP.

ABBREVIATIONS FOR SCIENTIFIC UNITS should conform to the Systeme Internationale (SI units). The statistical sheet. All tables must bear a title. Footnotes may be used in the tables, but not in the text.

The punctuation, both in the Reference list and in the text, should follow the style of the journal (see current issue) Papers in which the reference citations do not follow this format may be returned for retyping. References to papers "in preparation" or "submitted" are not acceptable; if "in press" the name of the journal or book must be given. Reference citations should not include "personal communications" or other inaccessible information; information derived from personal communications or from unpublished work by the authors should be referred to in the text.

ILLUSTRATIONS should be clearly lettered original line drawings or glossy prints, with their number and the author's name on the back. They will not be relettered by the publisher. The journal reserves the right to reduce the size of illustrative material. Half-tone photographs, particularly for electron micrographs or CT or MR images, must be of good quality. All micrographs must carry a magnification bar (e.g., 1 μm). Colour illustrations are accepted, but the authors will be required to contribute to the cost of the reproduction. An estimate of the cost will be provided. The number of all illustrations must be kept to a minimum. The desired position of figures and tables should be indicated in the typescript of the paper (e.g., fig. 1 near here, in brackets). Legends for figures should be listed on a separate sheet. All tables must bear a title. Footnotes may be used in the tables, but not in the text.

Attention to the details requested here will facilitate the expeditious processing of your paper. Authors are requested not to reprint their papers, or to authorize others to do so, without first consulting Oxford University Press (Copyright Department), Walton Street, Oxford OX2 6DP.

TRAVEL GRANTS

The Guarantors of Brain are prepared to consider applications for part or all of the costs incurred by clinical and non-clinical neuroscientists, aged under 40 and based in the United Kingdom, wishing to visit laboratories or clinical departments at home or abroad. Awards of up to £2000 may be available.

Applications will be considered for attendance at scientific meetings which relate directly to the applicants' research interests. Only exceptionally will applications to attend larger international conferences be considered. The Guarantors are unlikely to meet all of the costs of these visits and encourage applicants to seek part of their expenses from other sources.

Four copies of each application must be submitted at least two months before the planned date of departure.

The following documents are required:

1. An abbreviated curriculum vitae with a list of publications.
2. An account of the purpose of the visit.
3. The names of two referees.
4. A letter of invitation from the Host Department.
5. A statement of the costs with details of related applications.
6. A list of previous awards given by the Guarantors of Brain.

The applications should be sent to Professor Richard Frackowiak, MRC Cyclotron Unit, Hammersmith Hospital, 150 Ducane Road, London W12 0HS, UK. (Tel. 081 994 6945).

All successful applicants are expected to submit a short report of the visit on their return.
The plasticity of cutaneous hyperalgesia during sympathetic ganglion blockade in patients with neuropathic pain. R. D. Treede, K. D. Davis, J. N. Campbell and S. N. Raja
