From fundal findings in the acute stage of Leber's hereditary optic neuropathy: fundus photograph of a right eye 6 weeks after the onset of visual loss, showing prominence of the retinal nerve fibre layer in the region of the arcuate bundles above and below the optic disc, together with telangiectatic superficial retinal vessels. From 'The clinical features of Leber's hereditary optic neuropathy defined by the presence of a pathogenic mitochondrial DNA mutation' by P. Riordan-Eva, M. D. Sanders, G. G. Govan, M. G. Sweeney, J. Da Costa and A. E. Harding, pp. 319-337.
Contents

The clinical features of Leber's hereditary optic neuropathy defined by the presence of a pathogenic mitochondrial DNA mutation.
P. Riordan-Eva, M. D. Sanders, G. G. Govan, M. G. Sweeney, J. Da Costa and A. E. Harding
319

Presentation and clinical investigation of mitochondrial respiratory chain disease. A study of 51 patients.
339

Long-term follow-up of patients with chronic inflammatory demyelinating polyradiculoneuropathy, without and with monoclonal gammopathy.
Z. Simmons, J. W. Albers, M. B. Bromberg and E. L. Feldman
359

Investigations of the pathogenesis of acquired pendular nystagmus.
369

Regional cerebral blood flow during a self-paced sequential finger opposition task in patients with cerebellar degeneration.
K. Wessel, T. Zeffiro, J.-S. Lou, C. Toro and M. Hallett
379

Intramodal somaesthetic recognition disorders following right and left hemisphere damage
G. Bottini, S. F. Cappa, R. Sterzi and L. A. Vignolo
395

Brain systems for encoding and retrieval of auditory–verbal memory. An in vivo study in humans.
P. C. Fletcher, C. D. Frith, P. M. Grasby, T. Shallice, R. S. J. Frackowiak and R. J. Dolan
401

Dichotic listening in patients with partial section of the corpus callosum.
M. Sugishita, K. Otomo, K. Yamazaki, H. Shimizu, M. Yoshioka and A. Shinohara
417
Inhibitory and excitatory interhemispheric transfers between motor cortical areas in normal humans and patients with abnormalities of the corpus callosum.

Distributed representations of semantic knowledge in the brain.
S. L. Small, J. Hart, T. Nguyen and B. Gordon

Cross-over, completion and confabulation in unilateral spatial neglect
A. Chatterjee

Spatial hemineglect in back space.
G. Vallar, C. Guariglia, D. Nico and E. Bisiach

Auditory and visual sensory representations in human prefrontal cortex as revealed by stimulus-evoked spike-wave complexes
J. M. Clarke, E. Halgren, J.-M. Scarabin and P. Chauvel

Motion imagery in Parkinson’s disease.
A. Schnider, K. Gutbrod and C. W. Hess

Abnormal muscle coactivation patterns during isometric torque generation at the elbow and shoulder in hemiparetic subjects.
J. P. A. Dewald, P. S. Pope, J. D. Given, T. S. Buchanan and W. Z. Rymer

Physiological study of cervical dystonia. Task-specific abnormality in contingent negative variation.

Pericranial muscle hardness in tension-type headache. A non-invasive measurement method and its clinical application.
F. Sakai, S. Ebihara, M. Akiyama and M. Horikawa

Botulinum toxin-induced myopathy in the rat.
S. M. Hassan, F. G. I. Jennekens and H. Veldman

Review article.
The skeletal muscle sodium and chloride channel diseases.
A. J. Hudson, G. C. Ebers and D. E. Bulman
"Adaptive Behavior's unifying theme is the study of issues in the analysis or design of autonomous agents: that is, agents (such as animals, creatureslike, mobile robots ('animats'); or, software agents in virtual realities) capable of coordinating perception and action for extended periods of time in unknown and potentially hostile environments. Such coordinated activity is referred to as adaptive behavior if it increases the likelihood of survival ..." —Nature

"The new multidisciplinary journal Adaptive Behavior ... publishes research from robotics, artificial intelligence, cognitive science, psychology, behavioral ecology and ethology ... on the principles underlying adaptive behavior in living or artificial beings. Research especially focuses on the bottom-up approach to understanding behaviour ... Nearly all papers contain testable models (predominantly neural networks, parallel distributed processing, and genetic algorithms) that address real and interesting behavioural problems ... The papers are of a high standard." —The London Times Higher Education Supplement

Adaptive Behavior provides the first international forum for experimental and theoretical research on adaptive behavior in both animals and autonomous artificial systems.

Offering ethologists, psychologists, computer scientists, and roboticists the chance to compare insights, the journal features mechanisms, organizational principles, and architectures that can be expressed in computational, physical, or mathematical models. Articles, reviews and short communications address topics like perception and motor control, motivation and emotion, action selection and behavioral sequences, and characterization of environments.

1995 rates: Individual $50; Institution $135; Student*/Retired $35 (*copy of student ID required.) Outside USA add $16 postage and handling. Canadians add additional 7% GST. Prices are subject to change without notice. Prepayment is required. Send check drawn on a U.S. bank in U.S. funds, MC, VISA, or AMEX number to: MIT Press Journals 55 Hayward Street Cambridge MA 02142 Tel: 617.258.2909 Fax: 617.258.6779 journals-orders@mit.edu Published quarterly by The MIT Press in summer/fall/winter/spring. Volume 4 forthcoming. ISSN 1059-7123
See how the *Quarterly Journal of Medicine* has changed . . .

Long established as a journal which clinicians in practice need to read, the monthly *QJM* has introduced important *new features*.

- we have expanded the journal’s coverage to include original papers from the increasingly powerful research in molecular and cell science, where relevant to clinical medicine.
- a new mini-review series has been introduced which aims to bridge the gap between molecular science and clinical medicine.
- we have speeded up our publication time, and now average under a month from paper submission to acceptance.
- a new correspondence column has been introduced, to continue debate.
- an attractive new format - we have redesigned the pages for easier reading and with a new laminated cover.

**Papers from a recent issue include:**

**EDITORIAL**
‘Castles of health’. *A C Williams*

**MINI-REVIEW**
Molecular modelling: drugs by design. *W G Richards*

**ORIGINAL PAPERS**

Factor VII activity and ischaemic heart disease: fatal and non-fatal events. *V Ruddock and T W Meade*

Oedema in patients with Addison’s disease on replacement therapy: glucocorticoid excess and mineralocorticoid deficiency? *M D Flynn, A C Shore, D E Sandeman, D Mawson, M Donohoe and J E Tooke*

Presentation, clinical features and outcome in different patterns of atherosclerotic renovascular disease. *J O Connolly, R M Higgins, H L Walters, A D R Mackie, P L Drury, B M Hendry and J E Scoble*

Use of the rocking bed in the treatment of neurogenic respiratory insufficiency. *R M Chalmers, R S Howard, C M Wiles and G T Spencer*

Insulin-mediated glucose disposal in black South Africans with essential hypertension. *J R Wing, M T van der Merwe, B J Joffe, V R Panz and H C Sefele*

I would like to see a copy of the new *QJM* for myself. Please send an issue to:

3rd INTERNATIONAL CONFERENCE ON STROKE: HEART AND BRAIN
PRAGUE, CZECH REPUBLIC, OCTOBER 18-21, 1995

TOPICS
I HEART AND BRAIN INTERACTIONS
II HEART-INDUCED BRAIN DISEASES
   * MEDICAL SITUATIONS: CARDIOEMBOLIC STROKE
   * SURGICAL SITUATIONS: NEUROLOGIC DEFICITS FOLLOWING CARDIAC SURGERY
III BRAIN-INDUCED CARDIAC DISEASES
   * MEDICAL AND SURGICAL SITUATIONS
IV HEART AND BRAIN DISEASES: CURRENT STATUS AND PERSPECTIVES ON VASCULAR RISK AND THERAPIES
   * RISK FACTORS
   * CURRENT THERAPIES AND NEW PERSPECTIVES FOR TREATMENT AND PREVENTION OF CARDIO- AND CEREBROVASCULAR DISEASES

DEADLINE FOR ABSTRACTS: June 15, 1995

FOR INFORMATION: Dr. N.M. Bornstein, P.O. Box 50006, Tel Aviv 61500, Israel
   Fax: (+972) 3 5175674 or (+972) 3 5140077
