Organization of Auditory Cortical Areas in Man. Gastone G. Celesia 403

A Case of Mixed Transcortical Aphasia with Intact Naming. Kenneth M. Heilman, Daniel M. Tucker and Edward Valenstein 415

The Involvement of Noradrenaline in Motor Activity as Shown by Rotational Behaviour after Unilateral Lesions of the Locus Coeruleus. I. MacG. Donaldson, A. Dolphin, P. Jenner, C. D. Marsden and C. Pycock 427

Automatisms during Frontal Lobe Epileptic Seizures. S. Geier, J. Bancaud, J. Talairach, A. Bonis, M. Enjelvin and H. Hossard-Bouchaud 447

Neurotransmitter-related Enzymes and Indices of Hypoxia in Senile Dementia and other Abiotrophies. David M. Bowen, Carolyn B. Smith, Pamela White and Alan N. Davison 459

Disorders in Cerebellar Ocular Motor Control—I. John B. Selhorst, Lawrence Stark, Alfred L. Ochs and William F. Hoyt 497

Disorders in Cerebellar Ocular Motor Control—II. John B. Selhorst, Lawrence Stark, Alfred L. Ochs and William F. Hoyt 509

Cerebral Blood Flow and Metabolic Rate Early and Late in Prolonged Epileptic Seizures Induced in Rats by Bicuculline. Brian S. Meldrum and Bengt Nilsson 523

Auditory Brain-stem Responses in Brain Death. Arnold Starr 543

Reciprocal Ia Inhibition in Spastic Hemiplegia of Man. N. Yanagisawa, R. Tanaka and Z. Ito 555

The Stability of the Electrical Stimulation Map of the Motor Cortex of the Anaesthetized Baboon. M. D. Craggs and D. N. Rushton 575

Directions to Authors upon the Preparation of Papers

PAPERS must be typewritten on one side of the paper only and double-spaced, and submitted in duplicate with two sets of figures. In addition to the full title of the paper, authors should supply a ‘running title’ which will appear at the heads of the pages. The typescript should be carefully and finally revised before submission to the Editor. Clarity of style and brevity of expression are essential. Before submitting a paper it is always valuable to obtain the comments of colleagues who are unfamiliar with the work. We refer intending authors to the Journal of Physiology’s ‘Suggestions to Authors’ price 10p post-free from Cambridge University Press, Box 92, 200 Euston Road, London, NW1.

The paper should be accompanied by a declaration in the following terms: ‘The work reported in the attached paper entitled . . . has not been, and is not intended to be, published anywhere except in Brain.’

BIBLIOGRAPHIC REFERENCES should be limited to essential literature; they should be listed at the end of the paper in alphabetical order, and not numbered. In the case of a Journal: author’s name, date of publication in brackets, are followed by the title of the paper, the name of the Journal in full and underlined for italics, the volume number and the first and last page numbers of the paper quoted, both in Arabic numerals. In the case of a book: author’s name, date of publication in brackets, title of book underlined for italics, place of publication, publisher’s name, chapter and page numbers in Arabic numerals. Works by the same author should be given in chronological order, and if there be more than one in a year, they are marked a, b, c, etc.; when an author’s name recurs a short line is used. In the text numbered references are not used, but the author’s name is followed by the appropriate year in brackets.

ILLUSTRATIONS should, where possible, be line drawings in Indian ink on separate white boards, numbered, and with the author’s name on the back. Drawings and other illustrations should not exceed twice the size of the reproduction and thus lines must be thick enough to show up after reduction. It would be best if the author’s intentions were recorded upon a sheet superimposed upon the line diagram. Legends should be on separate sheets and numbered. Desired positions of tables and figures should be marked by writing instructions enclosed within lines and brackets, e.g. (Table 3 near here) or (Fig. 4 near here).

Half-tone photographs must be kept to a minimum. Excellent photographs with clear contrast are essential, especially for the reproduction of electron micrographs. Authors may be asked to contribute to their cost. There should be a bar on all micrographs giving magnification, e.g. 1 μm.

Authors are asked not to reprint their papers, or to authorize others to do so, without first consulting the Oxford University Press (Academic Division), Walton Street, Oxford, OX2 6DP.

Fifty free offprints are sent to the authors, who may order more direct from Oxford University Press, Walton Street, Oxford, OX2 6DP when they get their proofs.

Subscription rate for an annual volume of four issues: £12.50 ($37) post free. Single Issue: £3.50 ($10) net, postage extra.

Please address correspondence on business matters as follows:

Subscriptions to the current volume: Subscriptions Department, Oxford University Press, Press Road, Neasden, London, NW10 0DD.

Orders and inquiries for back numbers: Wm. Dawson & Sons Limited, Cannon House, Folkestone, Kent.

Inquiries about advertising, offprints and copyright: Academic Division, Oxford University Press, Walton Street, Oxford, OX2 6DP.

Malnutrition and Brain Development
Myron Winick

A growing body of evidence shows that malnutrition early in life is associated with retarded brain development. This book reviews the experimental and clinical studies on the effects of both severe malnutrition – such as marasmus and kwashiorkor – and of milder forms of malnutritional deprivation. The author discusses the socio-economic environment which breeds malnutrition, pre-natal malnutrition, and the behavioural changes induced by pre-natal and post-natal malnutrition. The book will be of interest to nutritionists, psychologists, neurophysiologists, and epidemiologists. £5 Oxford Medical Publications

The Role of Bodily Feelings in Anxiety
Peter Tyrer

This book describes a series of studies in which the relationship between bodily feelings and emotion is re-examined. The psychological and physiological effects of beta-adrenoceptor blocking drugs are described in induced anxiety in normal subjects and in pathologically anxious psychiatric patients. The results suggest that in normal anxiety bodily feelings are relatively unimportant, but that in some forms of abnormal anxiety they play a major part in shaping and maintaining pathological mood. The findings contradict the view that the difference between normal and abnormal anxiety is merely one of degree, and have much wider implications which are discussed fully in the final chapter. £6.50 Maudsley Monographs No. 23

CEREBRAL ARTERIAL DISEASE
Edited by R. W. Ross Russell
336 pages illustrated £12.50

Recent years have seen advances in certain related fields to cerebral arterial disease which have stimulated this fresh approach to an old subject.

This book deals with the discovery of methods for the measurement of cerebral blood flow and metabolism. It records the large amount of subsequent research on the regulation of cerebral circulation in health and on the disturbance which may occur in disease. It also describes the epidemiological studies which have indicated the various genetic and environmental influences underlying vascular disease. Reviews of recently introduced methods of investigation into arterial disease and, developments in the pathogenesis of arterial degeneration, diagnostic techniques and patient rehabilitation are also dealt with.

An Atlas of Tumours Involving the Central Nervous System

By R. O. Barnard, MD, The National Hospitals for Nervous Diseases, London;
V. Logue, FRCP, FRCS, Institute of Neurology, London;
and P. Reaves, MD, Baylor Medical Centre, Dallas, Texas.

Full colour photomicrographs together with case histories for more than fifty specific tumours make this unusual book an invaluable reference tool for the pathologist and the surgeon both during and after training.

1976 • 160 pages • 196 colour illustrations • £16.50

BAILLIÈRE TINDALL
35 Red Lion Square, London WC1R 4SG
The XENON-133 INHALATION METHOD for measurement of regional cerebral blood flow (rCBF) offers the advantage of a quick, simple, atraumatic and safe procedure, which eliminates the carotid artery puncture of the Xenon injection method. The inhalation method allows simultaneous bilateral measurements, thus enabling an unaffected hemisphere to serve as reference to an affected one. The atraumatic nature of this investigation makes it possible to perform frequent measurements over prolonged periods on a broad patient spectrum as well as on normal volunteers.

MEDITRONIC has been manufacturing multidetector rCBF-equipment for over 10 years, with numerous installations all over the world. This extensive experience along with the recent development and clinical verifications of appropriate computer programs has made possible the development of the MEDITRONIC INHALATION CEREBROGRAPH. This is a complete system, including the Xenon administration system, a digital data collection system with 8, 16, 24 or 32 brain detectors, an air curve scintillation detector with associated electronics, and a computer interface with punched paper tape or cassette tape output. The modular design allows easy system expansion in the field. Off-line calculation and presentation of rCBF-values can be performed on any computer able to process the Fortran programs developed by OBRIST et al (1975) and RISBERG et al (1975). The digital output of the MEDITRONIC INHALATION CEREBROGRAPH can also be interfaced to other peripheral devices or on-line connected to a computer.
